

SEIZURE MONITOR FACT SHEET

This fact sheet contains a list of seizure monitors, apps and devices that may detect seizures and notify loved ones or emergency services via audible alarm, text message, phone call or by other means. **This is not a definitive list.**

The use of a seizure alert device is an individual choice, with different devices offering varying features and differing degrees of sensitivity and reliability. Each device should be evaluated to ascertain their suitability for your individual needs and seizure types.

1

Some devices are registered medical devices in their country of origin. We recommend that a seizure alert device should be considered as just one part of an overall risk reduction review.

Reducing risk and best practice Epilepsy Management is a discussion that is best had with your treating clinician.

Epilepsy WA has several seizure alert technology options on display in our office in Nedlands and offers a free Emfit Epilepsy Sensor Alarm Bed Mat loan service for evaluation purposes (subject to availability, terms & conditions apply). Call 1300 660 880 for more information or to book an appointment to view the seizure monitor display devices.

EWA (EPILEPSY WA) has recorded online information sessions about the Empatica Embrace Watch, Nightwatch, Epihunter and the Sami Camera. These can be viewed on the Epilepsy WA website: www.epilepsywa.asn.au/online seminars. Other webinars will be added over time.

Epilepsy WA does not endorse any of the products listed below and is not a manufacturer, distributor or seller of the products shown in this information sheet and related pages. Epilepsy WA offers only introductory information about the potential of these devices and does not accept responsibility for the consequences of the actual use of any device listed. All consumers are encouraged to confirm item particulars and pricing, with the relevant supplier, before placing any order

DEVICES FOR DAYTIME OR 24HR USE

Embrace2 Watch by Empatica Watch + Apps + Smart Phone/paired device + subscription plan + internet connection **8% discount code available**

COST from \$361 AUD + Monthly subscription (\$15.75 - \$71.44 AUD p/month). Shipping \$51.42 AUD. Further details on subscription plans and USD prices outlined below.

WHERE TO BUY: www.empatica.com **8% discount code available from Epilepsy WA**

WHAT IS IT? A watch created in the USA to detect **tonic clonic seizures**. It can also monitor sleep quality, activity levels and act as a seizure diary. When it detects a tonic clonic seizure, it will send an alert SMS advising of the seizure & the wearer's GPS location to caregiver's mobile phones. There is a monthly subscription fee to enable the monitoring and alert function on the watch. A compatible Smart Phone and either an Internet or cellular data connection is required. **The Embrace2 is water-resistant up to 1 metre (but NOT suitable for use in salt water)**. The Embrace2 does not monitor heart rate, but it instead looks for repetitive movements of more than 20 seconds and electrodermal activity. It is available in 9 colours / strap choices including vegan options. **Suitable from age 6 to adult**. Several devices are compatible as the paired device, including those running IOS 10 +, android v5 + & Bluetooth low energy BLE 4.0/Bluetooth Smart.

COST USD274 for the watch (approx. \$361 AUS) plus a monthly subscription charge. There are 3 subscription levels with a **monthly fee (paid in euros)** – Lite **9.90 EUR/\$15.75 AUD**), Standard (**19.90 EUR/ \$31.74 AUD**), Plus **44.90 EUR/\$71.44AUD**). Annual options available. Shipping is \$39 USD / \$51.42 AUD. Prices quoted will change with exchange rate fluctuations.

SUBSCRIPTION PLANS

Lite Plan - ideal if you want a single caregiver and the benefit of event detection.

Standard Plan – sends an alert to up to three Caregivers on detecting an event, with GPS location, it has a Rest Mode which may detect milder seizures during period of low physical activity.

Plus Plan – as above with the bonus of having an unlimited number of carers that can be notified.

EpiHunter EEG Headband (LOAN FOR USE) + Apps + Android Phone

NDIS Registered. Detects absence seizures & focal onset impaired awareness seizures.

COST Subscription model from \$790 AUD per annum. Free Shipping Australia wide. 30 day money back guarantee.

WHERE TO BUY www.seizurealertaustralia.com.au/product/epihunter/

WHAT IS IT? Epihunter was created to detect absence seizures and notify care givers. It may be particularly relevant for use in classroom settings. **Suitable from aged 4 upwards.**

EpiHunter works in conjunction with a wearable EEG headband and an **android** smart phone app (available for android ONLY). The app enables the activation of video recording via the linked phone, to capture footage of a seizure, including the moments before and after the event. The torch on the android phone which records the seizure, illuminates in the event that an absence seizure is detected. The event is also logged in an electronic seizure diary. The care giver requires an app to be installed on their android or apple smart phone for notification purposes.

The Epihunter Core smartphone app uses brainwaves from the EEG headset to detect and log absence seizures in real time. The headset has 3 gold-plated frontal copper dry sensors. The sensors are on a velcro strip and can be put into a sports cap or beanie. You can remove the Sensor module from the headset for charging. The Epihunter uses a subscription rather than a purchase model. You can purchase 'cool hats' adapted specifically for use with the headband in Europe www.epihunter.com/shop

COST from **\$790 for a 1 year basic package to \$1,450 inc GST** for a 2 year value package with varying options in between. Your choice of Epihunter Subscription Package durations with options including or excluding a Samsung A10/A20e or similar phone. All packages include the EEG headband and accessories. 30 day money back guarantee. There is a current offer for the Epihunter for \$250 inc GST + 2 months access included (EEG Headset, Epihunter App, Phone stand. This does not include an android device).

SureSafeGO PLUS 4GX SmartWatch (with fall detector) NDIS registered. Water resistant.

WHAT IS IT? SureSafeGO Plus 4GX Smart Watch is a wrist worn, personal watch – style alarm that allows two-way communication between the wearer and their responder and an inbuilt automatic fall detector. You can talk to your emergency contact like you would on a telephone and they will be automatically contacted if the watch detects a fall, which may occur with some seizure types. In addition, a text message is sent to three emergency contacts with the watches location, if a fall is detected. The duress mode could potentially be utilised if the wearer experiences an aura by pressing and holding the SOS button, which then calls the designated contacts in succession and sends a text message. A GPS tracker allows the wearer to be located at any time. A heart rate sensor tracks heart rate for (non-medical grade) analysis but an alarm or notification system is not linked to the heart rate tracking function.

COST?

\$479 with free shipping. The SureSafeGO PLUS 4GX medical alert watch comes with a Telstra SIM. **After the first 12 months, the SIM is \$40 per year** which covers all reasonable call costs.

WHERE TO BUY

Visit www.personalalarms.net.au or tel:1300 739 991

Life Minder Fall alarm + sim card **NDIS registered. Water resistant.**

COST \$425 for the alarm which includes \$25 value SIM CARD. Optional wrist strap \$27. Free delivery

WHERE TO BUY Visit www.lifeminder.com.au or call the office 1800 68 44 22 (Free Call)

WHAT IS IT? The Life Minder Personal Safety Alarm is a water resistant, wearable device that detects the sudden impact of a fall (which may occur with some seizures) and can alert up to 8 nominated people by sending a text message containing a Google Map showing its location accurate to within 2 meters. In addition, it will automatically call the telephone numbers in turn of up to 8 nominated support people. The wearer can also press the SOS function themselves to send a conscious alert with two-way speech to the first contact on the list.

Easily attached to a belt, lanyard, wrist strap or key ring.

It initially comes supplied with a pre-paid \$25 starter pack SIM card. The SIM card can be reloaded when required for as little as \$15.00 per annum (subject to change). Comes with a docking station.

Available in black or white.

COST The all-inclusive, once only cost, is \$425 which includes programming, a \$25 value sim card and express delivery. A wrist strap is available as an optional extra at a cost of \$27. There are no monthly monitoring fees and it is supplied, out of the box, ready for use.

DEVICES FOR NIGHT-TIME/BED-TIME USE ONLY

Emfit Epilepsy Sensor Alarm Bed Mat Bed Sensor + Controller + Portable Alarm Unit + Batteries + Mains power adaptor **NDIS registered.**

COST \$1019 for the mat & controller, \$1438 with pager option, \$1496 with lifeminder option. Shipping Included

WHERE TO BUY Visit www.epiassist.com.au Phone 1800 68 44 22 or email sales@epiassist.com.au

WHAT IS IT? It is a bed sensor that was created to detect bedtime **tonic clonic seizures**, through a thin film ferroelectric sensor that is placed under OR on top of the mattress. It is suitable for children and adults who are at risk of a convulsive seizure. The mattress type will determine the fitting choice.

When a seizure is detected, an alarm is sounded through the devices alarm system. This device can also be used to alert carers when a person leaves the bed or does not return within a set period. There is a mains power lead and the unit does take batteries for us in case of power failure. Two mats can be connected to each other for those sleeping alone in larger beds. The sensitivity & volume can be adjusted to suit.

Comes with Bed Sensor, controller, mains power lead, wall mounting bracket, bed head bracket, 2 x AA batteries and user guide.

PAGER MODEL A pager is additionally available, which has a maximum range of 200 metres, to alert carers in larger homes, who may not hear the audible alarm. For adults living alone, the sensor can be connected to a Life Minder device (via special cable) and it can notify pre-programmed mobile phones to let loved ones know that a seizure has been detected.

Further details can be found here: www.epiassist.com.au/Epilepsy-Safe-Bed

6

Medpage MP5V2 Specialist Monitor for Seizure Movement Bed Sensor + Controller + 2 Wireless Pager units + Batteries + Mains power adaptor
NDIS registered. Detects various seizure types

COST MP5V2 Model \$696 / **MP5UT Model** (for Children under 25kg) \$650. Shipping approx \$70

WHERE TO BUY Visit www.doability.com.au or call 1300 122 355

WHAT IS IT? A bed sensor that is positioned under a mattress in readiness to detect the convulsive movements of tonic clonic seizures and it has a built in microphone to help detect vocalisations pre or during a seizure. An alert is sent to a portable wireless pager in another room (2 supplied) when a seizure is detected. The device also has adjustable sensitivity to allow for bodyweight and mattress type. The monitor is powered by a mains charger and has a battery backup in case of mains power failure. All aspects of the monitor are adjustable, allowing each user to tailor alert thresholds based on duration and intensity of seizure movements.

7 This device is best suited for older children (minimum weight 25kg) and adults who experience nocturnal tonic clonic seizures. Medpage also offer an alternative device for children who weigh under 25kg, the MP5-UT, which can also be used in cots.

The NightWatch NDIS registered. Detects a variety of seizures. Can be worn on arm or calf.

COST \$2490 with FREE shipping

WHERE TO BUY www.seizurealertaustralia.com.au/product/nightwatch/

WHAT IS IT? A wireless armband for nocturnal epilepsy that monitors heart rate and motion while the wearer is lying in bed. When the NightWatch detects a seizure, a warning is transmitted to a caregiver via a wireless signal to the armband's corresponding base station. The NightWatch was **created to detect various types of seizures including Tonic seizures, Tonic-clonic seizures, Hypermotor seizures, Clustered myoclonic seizures.** It can be connected to the internet, so you can collect the wearer's heart rate and motion data. The armband can be worn on either the arm or the calf.

Whilst the Night Watch has been tested to detect Tonic Clonic Seizures in children and adults aged 4 years and older, there are some reports of children as young as 18 months using this device, but with an increased risk of false alarms occurring.

Users who live alone can add a 4G GSM Module & Panic Button that will alert up to 5 nominated people via text message, phone call or email, if the alarm is either triggered from a possible seizure detection or if the user presses the panic button. An additional cost of \$495 applies.

Download the informative brochure here

www.seizurealertaustralia.com.au/wp-content/uploads/2020/02/nightwatch-brochure.pdf

SAMi – The Sleep Activity Monitor Camera + app + IOS device (option to purchase a package with Ipod/iPad mini/wifi router if required)

COST \$650 (SAMi-3 camera only, top left)

\$1490 - Standard SAMi-3 Kit (the SAMi-3 Camera, tested & Preconfigured 6th Generation 16/32GB iPod Touch, tested & Preconfigured Dual Band WiFi Router and accessories, bottom left)

\$1990 - JB Edition SAMi-3 iPad Kit (the SAMi-3 Camera, tested & Preconfigured iPad Mini 4 WiFi 128GB, tested & Preconfigured Dual Band WiFi Router & all accessories, bottom). **FREE** Shipping.

WHAT IS IT? A sleep activity monitor for caregivers & individuals who need to watch carefully for abnormal movements at night. During sleep, audio-video information from a remote infrared video camera is sent to an app that runs on an iOS device such as an iPhone or iPod Touch. The SAMi app records & analyzes the video for unusual activity. When an unusual event is detected, it sounds an alarm & records live audio & video from the SAMi network camera on the chosen device. You can then share these recordings with your doctor.

WHERE TO BUY Visit www.samialertaustralia.com.au/shop

BABY MONITORS

If a seizure alert technology device is not practical for you to purchase, **you may opt to use a baby monitor as a listening device or movement sensor.** These monitors can be purchased at differing price points. Some baby monitors have differing functionality to include video, movement etc. Please note **these are not purposely designed as a seizure alert monitor** however, they may be useful to amplify the sounds of a seizure occurring if the seizure results in noise creation. In addition, some people opt to use baby monitor devices in conjunction with a seizure alert device, to help amplify the sound of any alarm. **We encourage people to research the capability around any device they purchase in advance.**

SPECIFIC ITEMS FOR INFANTS & TODDLERS

Owlet Smart Sock Plus Sock + App + optional camera

COST \$799.99 for both the sock and the camera. These can be purchased individually (the sock does not require the camera to work, but it does not provide any visual footage); sock costs \$549.99, owlet cam costs \$249.99 (Smart HD Video Baby Monitor with nightvision & 2 way audio). Existing customers with Version 3 can purchase an additional sock suitable for use up to age 5 for \$109.98 **FREE** Shipping

WHERE TO BUY www.owletcare.com.au

WHAT IS IT? The Owlet Smart Sock will track your baby's heart rate and oxygen while they sleep and send notifications if baby needs to be checked on. The Owlet Monitor Duo tracks your baby's heart rate and oxygen levels while streaming live video and audio to your phone. Stay informed of your baby's needs with live readings of heart rate and oxygen levels in the Owlet app. Parents can see and hear baby from anywhere, and multiple users can access the same account with a single login.

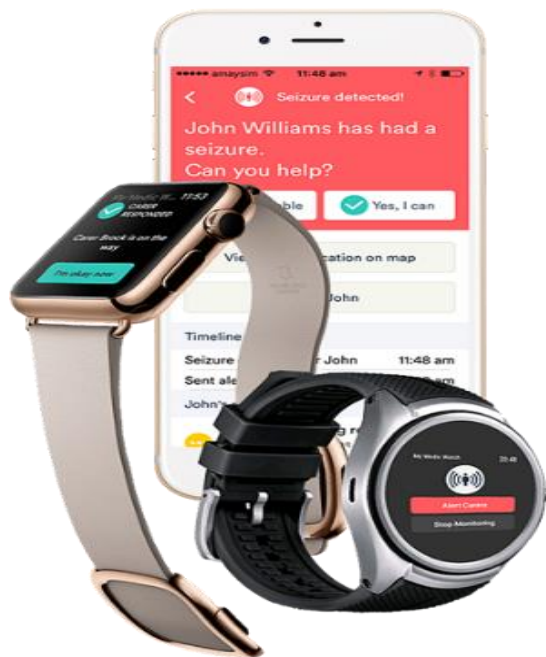

The duo consists of a wearable 'sock' and a camera. The device was originally **designed to be used by children from birth (5lb/2.2kg up to 18 months of age (11kg)). From October 2021 it is now suitable for children from birth up to 5 years of age (or until they weigh around 25kg).** Existing customers with Version 3 can purchase an additional sock suitable for use up to age 5 for \$109.98. May also detect certain seizures, as there is often a fluctuation of heart rate or blood oxygen level during a seizure event.

SMART PHONE APPS

In addition to seizure alert technologies, apps exist that may assist with scheduling medication reminders, act as seizure diaries and more.

Seer Health has recently launched a seizure forecasting app which may help some individuals to forecast when they are more likely to experience a seizure, as one part of the apps functionality. Visit www.seermedical.com/seer-app/

All apps should only be considered as one part of an overall risk reduction strategy.

My Medic Watch App for android and IOS

COST There is no cost for the app but there is a monthly fee for the detection and alert service with 3 subscription levels & a **monthly fee** – Starter (**\$10 AUD**), Plus (**\$20 AUD**), Premium (**\$55 AUD**). You also have the option to pay yearly.

WHAT IS IT? An app that runs on Apple and Android smartwatches. It **aims to automatically detect falls or seizures**, using algorithms to interpret data captured by smartwatch sensor technologies. The app is **compatible with a variety of Apple, Samsung and Android Smart Watches**. If the My Medic Watch app detects a seizure or fall, it notifies his/her caregivers, providing details of the individual's location. Each alert recipient can send a response advising whether they are able to assist, which is forwarded to both the individual and the other caregivers.

The My Medic Watch seizure app may capture 'generalised tonic-clonic seizures'. In some cases, if and only if the smartwatch is worn on the same side as the seizure side, it might capture myoclonic seizures and might also capture a focal motor seizure.

PLANS AVAILABLE

Starter Plan – seizure and fall detection, manual alert function, push notification to up to 3 carers, data recorded and email support

Plus Plan – as above with up to 5 caregivers notified, sms messages, ability to access and share data

Premium Plan – as above with unlimited number of carers notified, call centre & data analysis

WHERE TO BUY / DOWNLOAD

<https://play.google.com/store/apps/details?id=com.mymedicwatch.seizure.prod>

or <https://apps.apple.com/au/app/seizure-alert-my-medic-watch/id1392205704>

SeizAlarm App App for IOS

COST There is no cost for the app, but there is a \$14.99 USD/month or \$149.99 USD/year subscription required for seizure detection and the help request service. (Approx \$20 AUD monthly / \$201 AUD Annually dependent on exchange rates)

WHAT IS IT? An iPhone and Apple Watch app that enables those with epilepsy and other seizure disorders to alert emergency contacts automatically when seizure-like motion is detected or manually if they need immediate help or think they might need help soon. It is suggested that using the watch is more accurate and it also allows you the option of heart rate based detection (not available on iPhone).

Emergency contacts will receive a text message, email and phone call letting them know the user needs help with the GPS coordinates of where the user is located. The user has control over which contact methods are used for each contact. The “Help Request” button should be used if you feel a need for immediate assistance or the “Time Delayed Help” button can be used if you have frequent mild to moderate auras (simple-partial seizures), that do not always result in tonic-clonic seizures. Using the Time Delayed Help button starts a timer and if the delayed help request is not ended manually by the user after user-controlled set period, then a help request is sent to your emergency contacts. This option can also be used if the user believes they are experiencing any other symptoms you believe could be a precursor to a seizure.

SmartWatch Inspyre App for android or IOS

COST \$26.96 activation fee + annual service fee from \$160 - \$754 (dependent on current exchange rates)

WHAT IS IT? A movement detection and alerting monitoring app that can be used with the Apple Watch and with Samsung Gear S3, Gear Sport, and the Samsung Galaxy/Galaxy Active 1 and 2 watch. The watch looks for repetitive shaking motion - upon the detection of such motion, the SmartWatch Inspyre sends information from the watch to the user’s phone via Bluetooth. The phone then sends out alert notifications that abnormal motions have been detected to whomever has been selected as an alert recipient.

PLANS AVAILABLE

The Bronze, Silver and Gold plans ALL offer motion detection, instant alerts, and event recording with secure access. They also all offer adjustable settings for both am and pm use - the user can determine the intensity and duration of the movement they would like the Inspyre to detect and alert upon.

Bronze Plan - single contact only

Silver Plan - up to five contacts to receive a text message alert, one primary contact to receive a voice call, a “Get Help” button, and snooze option where the wearer can pause the movement monitoring

Gold Plan - unlimited contacts receive a text message alert, one primary contact will receive a phone call, GPS location of the individual in the text of the alert, medication reminders, a snooze option, symptom reporting, and heart rate data recording during an event

WHERE TO BUY www.smart-monitor.com

COST \$20 USD /\$26.96 AUD Activation Fee **plus** annual service fee (choice below)

Android Annual Service Fee:

- Bronze USD119/\$160 AUD
- Silver USD239/\$322 AUD
- Gold USD479/\$646 AUD

IOS Annual Service Fee:

- Bronze USD179/\$241 AUD
- Silver USD359/\$484 AUD
- Gold USD559/\$ 754 AUD
